

THANK YOU FOR MAKING OUR NEW BOREHOLE POSSIBLE!

Telik Junior School plus the neighboring community appreciates you for giving hope to hundreds of little ones in the school and people in the community!

Between 1 February 2020 and 14 February 2020, drilling of the borehole, installation of the hand pump and finishing were carried out successfully. On 14 February 2020, the well was launched!

You are not only meeting the immediate water needs but are giving a future full of life and possibilities by providing healthy water for drinking, cooking, cleaning, irrigation of crops, and more to the entire community. We could not be more grateful!

Here are a few words from the community:

“We used to walk a long distance to fetch water, but now water is in our neighborhood, yet it’s clean,” Linda from the community.

“This is a very good thing and we are so grateful because the number of children suffering from flu (due to lack of sanitation) and waterborne diseases has reduced because they are able to get clean water from the borehole for drinking and other domestic use. Children no longer walk long distance to fetch water for cooking and cleaning. Clean water is available for cooking, washing and cleaning the classrooms at school. So we are not worried about that anymore because even the borehole is at school. The beauty is its serving also the people in the community. We want to appreciate you for bringing hope and life to us.” – a Telik Junior School Teacher

Thank you so much!!!
